About Me

I am T Ramnarayan Srivatsankith, a B.Tech student in Information Science and Engineering with hands-on experience in Python, Java, C, data structures and algorithms, database technologies, REST APIs, and software application development. I have developed projects involving AI-powered applications, computer vision, natural language processing, and database integration. I possess a strong foundation in programming, analytical thinking, and problem-solving, and I am eager to apply my technical skills to software development and system engineering challenges.

Skills

- **ProgrammingLanguages:** Python, Java, C
- **Computer Science Fundamentals:** Data Structures Algorithms
- **Databases:** MySQL, MongoDB
- **Backend Development:** Flask, REST APIs
- **Web Technologies:** HTML, CSS, JavaScript
- **AI & Machine Learning:** TensorFlow, Scikit-learn, Neural Networks, NLP, Computer Vision
- **Tools & Libraries:** GitHub, OpenCV, MediaPipe, Streamlit

Internships

Laboratory forElectro-OpticsSystems(LEOS), ISRO Intern

- Explored reinforcement learning techniques for resource allocation and workflow optimization in engineering applications.
- Studied reward-based learning strategies for task prioritization, scheduling efficiency, and adaptive decision-making.
- Investigated AI-driven approaches to optimize engineering scheduling problems.

IBM SkillsBuild Trainee

- Completed training focused on emerging technologies, AI fundamentals, and career readiness.
- Developed knowledge of digital tools, analytical thinking, and professional problem-solving.
- Strengthened communication and collaboration skills through structured learning activities.

Infosys Springboard Virtual Internship

- Completed learning activities related to artificial intelligence and machine learning.
- Explored KnowMap, a cross-domain knowledge mapping tool for identifying entities and relationships. Contributed to the MedGraphX project focused on food–drug interaction analysis.

Projects

1. **CHITTI-Voice-Assistant-AI**

Technologies: Python,Speech Recognition, Google Gemini API, HTML, CSS, JavaScript

- Developed a Python-based voice assistant that processes natural language commands and generates relevant responses.
- Integrated the Google Gemini API to enable contextual conversations and intelligent query handling.
- Implemented speech recognition, text-to-speech, and dynamic application control features.
- Combined backend functionality with web technologies to improve user interaction and application usability.

2. **Sign Language Detection System**

Technologies: Python, OpenCV,MediaPipe,Scikit-learn, Machine Learning

- Developed a computer vision-based application to recognize American Sign Language (ASL) gestures in real time.
- Used OpenCV and MediaPipe for image processing and gesture feature extraction. Built and trained a Random Forest classification model using Scikit-learn to classify ASL gestures.
- Implemented a workflow involving data collection, preprocessing, model training, and real-time prediction.

3. **MedGraphX – AI-Powered Medical Assistant**

Technologies: Python, Flask, Streamlit, NetworkX, MySQL, Scikit-learn

- Developed an AI-powered healthcare application focused on food–drug interaction analysis.
- Applied knowledge graph techniques to represent relationships relevant to food–drug interactions.
- Integrated machine learning and natural language processing techniques to support information analysis.
- Implemented interactive data visualisations to present insights in a clear, user-friendly format.

Education

B.Tech – Information Science and Engineering
M. S. Ramaiah University of Applied Sciences, Bengaluru
CGPA: 8.25/10 | Expected Graduation: 2027

Class XII – Higher Secondary Education
Whitefield Global PU College | 2023
Percentage: 75%

Class X – ICSE
New Baldwin International School | 2021
Percentage: 90%

Leadership Experiences

- **Committee Member** – Cynergy Coding Club: Helped organise coding sessions and LeetCode practice workshops to encourage programming and problem-solving skills among students.
- **Event Coordinator – National Techfest (RUAS):** Supported event coordination and hackathon activities, contributing to planning and participant management.
- **Head Student Coordinator – Jury Cell, IIC Regional Meet 2025:** Coordinated with panel coordinators and jury members to support event operations and communication.
